

# A STUDY OF EMPLOYMENT OF FLORIDIANS WITH A DISABILITY

2019

THE  
**ABLE**  
TRUST

FLORIDA  
**CHAMBER**  
Foundation

## Executive Summary

One important component of Florida preparing itself for the year 2030 is providing a trained workforce for the estimated 1.7 million net new jobs that will be needed in our state. This report uses American Community Survey data from the U.S. Census Bureau that shows detailed labor force data for each of Florida's 67 counties from 2013 through 2017. This report can serve as a reference for those who are interested in the movement, over time, of variables such as unemployment rates, labor force participation, and employment of people with a disability in Florida.

There are an estimated 2.67 million Floridians who indicate that they have a disability, according to the latest data available. This is 13.4 percent of all Floridians. In the 18 to 64 age group – the group most likely to be in the workforce – 1.2 million Floridians indicate they have a disability.

The good news is that the number of Floridians who have a disability that are working has increased each year since 2013. This number varies substantially and has decreased for some Florida counties. In context, many of Florida's small population counties are losing jobs, something that is happening all over the U.S. Most of Florida's Metropolitan Statistical Areas (MSAs) are gaining jobs, and most of them are seeing increases in the employment of Floridians with a disability.

The employment of Floridians with a disability has increased from 347,119 in 2013 to a total of 386,739 in 2017 – that's an increase of 39,620 people. Also good news is that Florida's unemployment rate for people with a disability has dropped from 23.2 percent to 16.3 percent from 2013 to 2017. As a comparison, the unemployment rate for Floridians who don't have a disability dropped from 11.0 percent to 6.6 percent during the same time period.

One of the challenges for Florida is that the numbers of people of normal working age who are not in the workforce is increasing – both those with, and those without a disability. This trend of an increasing amount of people who are not in the workforce, now more than 2.9 million people in Florida with more than one in four of that group having a disability, is preventing Florida companies from having a higher supply of talent to choose from as they operate and expand their operations in our state.

While the unemployment rate for persons who have a disability is falling in Florida, there could be opportunities to increase the numbers of persons with a disability who are working. One option is to increase the number of company and government internships, apprenticeships, mentoring, and other workforce experiences for persons with a disability, so more people can get valuable work experience to help them get that all-important first job or a job that lets them re-enter the workforce.

Another option is to remove the penalties for workers with disabilities, so that marginal increases in incomes do not result in severe losses of those programs that actually help them live independently and help them become able to work, provide for themselves and advance their careers.

## Unemployment Rate for Workers with Disabilities

As Florida prepares for the year 2030, each component of its population will be important to provide a trained workforce for the estimated 1.7 million net new jobs that will be needed by then. One component of Florida’s workforce examined here is the population of Floridians with disabilities. While there does exist a monthly unemployment rate for persons with disabilities (PWDs) at the national level, there are no estimates for any state. Even the unemployment rate, if it were available, would not be sufficient to tell the story about Florida’s progress to help increase Florida’s workforce by helping those persons who want to work get into, or back into, the workforce. Also important to the narrative are the number of persons working and those who are not in the labor force.

This report is an update and extension of the Florida Chamber Foundation’s 2016 Florida Scorecard Research Report – *Quantifying the Unemployment Rate for Workers with Disabilities in Florida*. In that paper, a single year of unemployment rates for Floridians with disabilities was reported on for the state and estimated for all 67 counties of Florida. In that previous report it was noted that “a useful tool for Florida policymakers would be a detailed, regularly-published unemployment rate for persons with disabilities (PWDs) in this state, so that analyzing the data could show where policies are making a difference in helping those persons with disabilities that want to work find jobs.” This report is a step toward that process as it shows the difference over time in the number of persons with disabilities working, by county, and the movements in the unemployment rate and number of persons not in the labor force for each Florida county using the latest available consistent data set that covers all Florida counties during the time period 2013 through 2017.

The Florida Chamber Foundation has been reporting the unemployment rate for persons with a disability by county for the last two years on The Florida Scorecard® which can be found at [www.TheFloridaScorecard.org](http://www.TheFloridaScorecard.org). Also on The Florida Scorecard® is the high school graduation rate for persons with a disability. Those numbers are reported from 2010 through the 2017-18 school year.

There are an estimated 2,673,685 Floridians with a disability, according to the latest data from the U.S. Census. That is 13.4 percent of all Floridians. In the 18 to 64 age range – the typical age group most likely to be in the workforce – Florida has 1,208,053 people who have one or more disabilities. What is often overlooked are those people who are not in the workforce. Unemployment rate calculations only include those who are working and those who are looking for work. The rest of the people in that age category are neither working nor looking for work – that category is labeled “not in the workforce.” There are many reasons why someone of working age might not be in the workforce. Caring for aging parents, caring for young children, or completing an education are some of the possible reasons. However, for people with disabilities, the limitations to working can often be related to workplace barriers and misperceptions.

Although there is no regularly published monthly data at the state level for persons with a disability, there is a national monthly series produced by the U.S. Bureau of Labor Statistics. The data series starts in June of 2008 and it shows that the unemployment rate for individuals with a disability is higher than the overall rate in the U.S. Both these series include individuals age 16 years and older.

The data used to estimate the unemployment rate for persons with a disability are from the Current Population Survey (CPS), conducted for the Bureau of Labor Statistics (BLS) by the U.S. Census Bureau. The questions used in the survey are shown in Appendix 1. The survey population is approximately 60,000 households nationwide. To be included in this series, the respondents must report the presence of someone 16 or older in their household with a disability.

The data used in this report is from the U.S. Census Bureau’s American Community Survey’s 5 year estimates for 2013 to 2017. This data is self-reported through the American Community Survey (ACS) reporting process. The data and percentages here reflect their division of the civilian noninstitutionalized population for ages 18 to 64 years. These numbers are estimates, and the margins of error for each of the estimates is available in ACS reports.

Another thing that needs to be considered is the balance between full-time and part-time work. In 2017 in Florida, only 19.9 percent of persons with a disability in the 18-to-64 year age range worked full time, year round. That compares with 54.1 percent of workers with no disability. Here are charts that shows both groups:

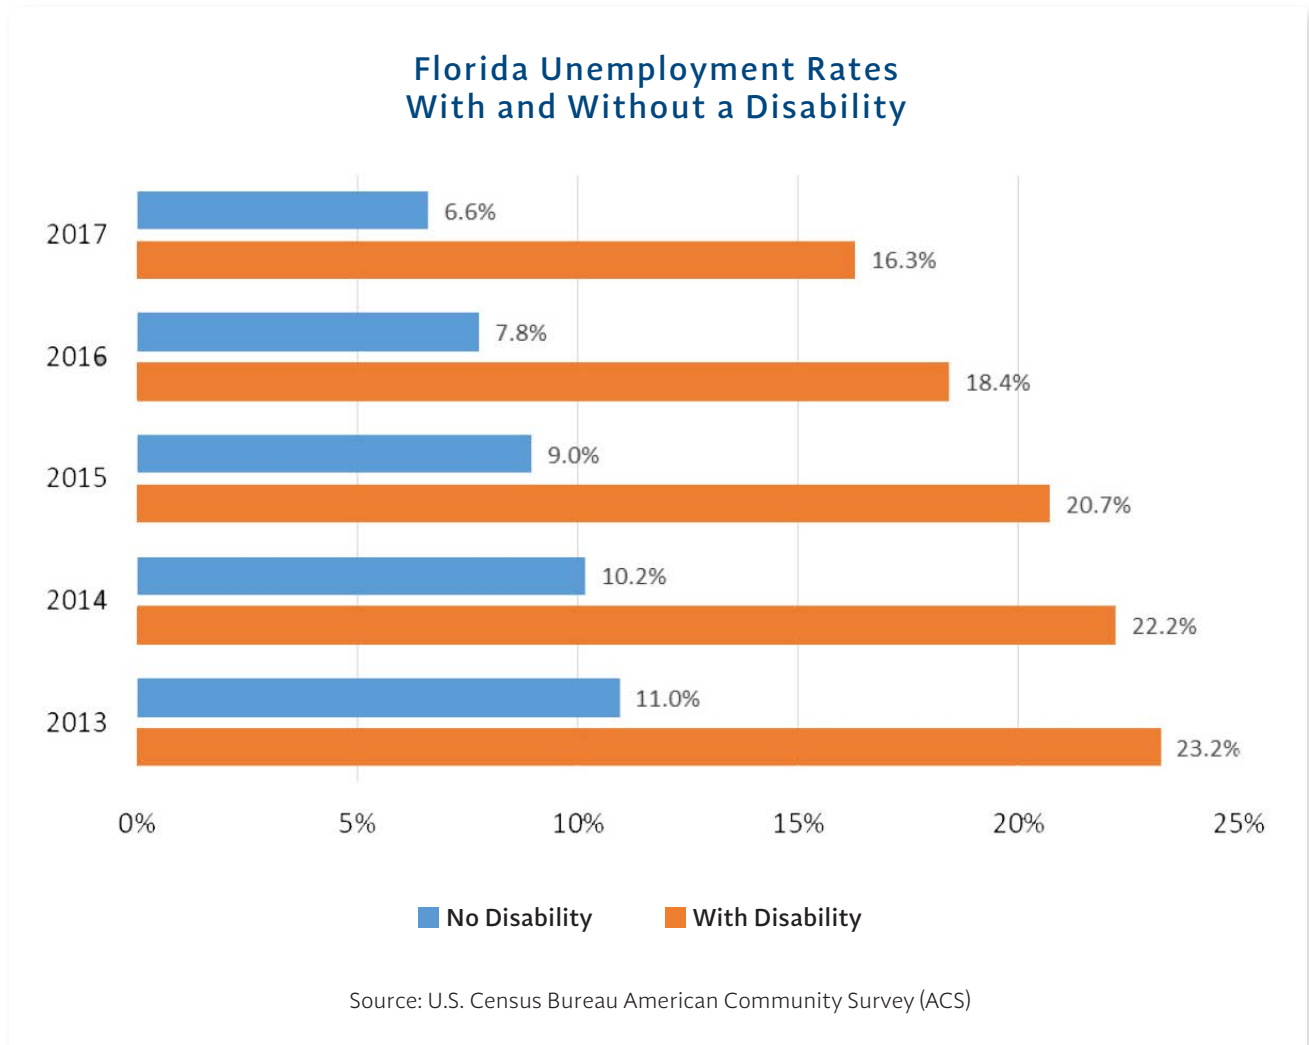

Source: U.S. Census Bureau American Community Survey (ACS)

The charts above show that there are substantial differences between workers with disabilities in terms of the percentages that work full time versus those who are not working. The majority of Floridians with a disability are not working – 61.6 percent in the most recent data. For details on all Florida counties for both of these metrics, see Appendix 2 and Appendix 3.

You can see from the following chart that the unemployment rate for Floridians with a disability has dropped each year since 2013. Florida's rate is still higher than the U.S. rate, but the gap is closing.

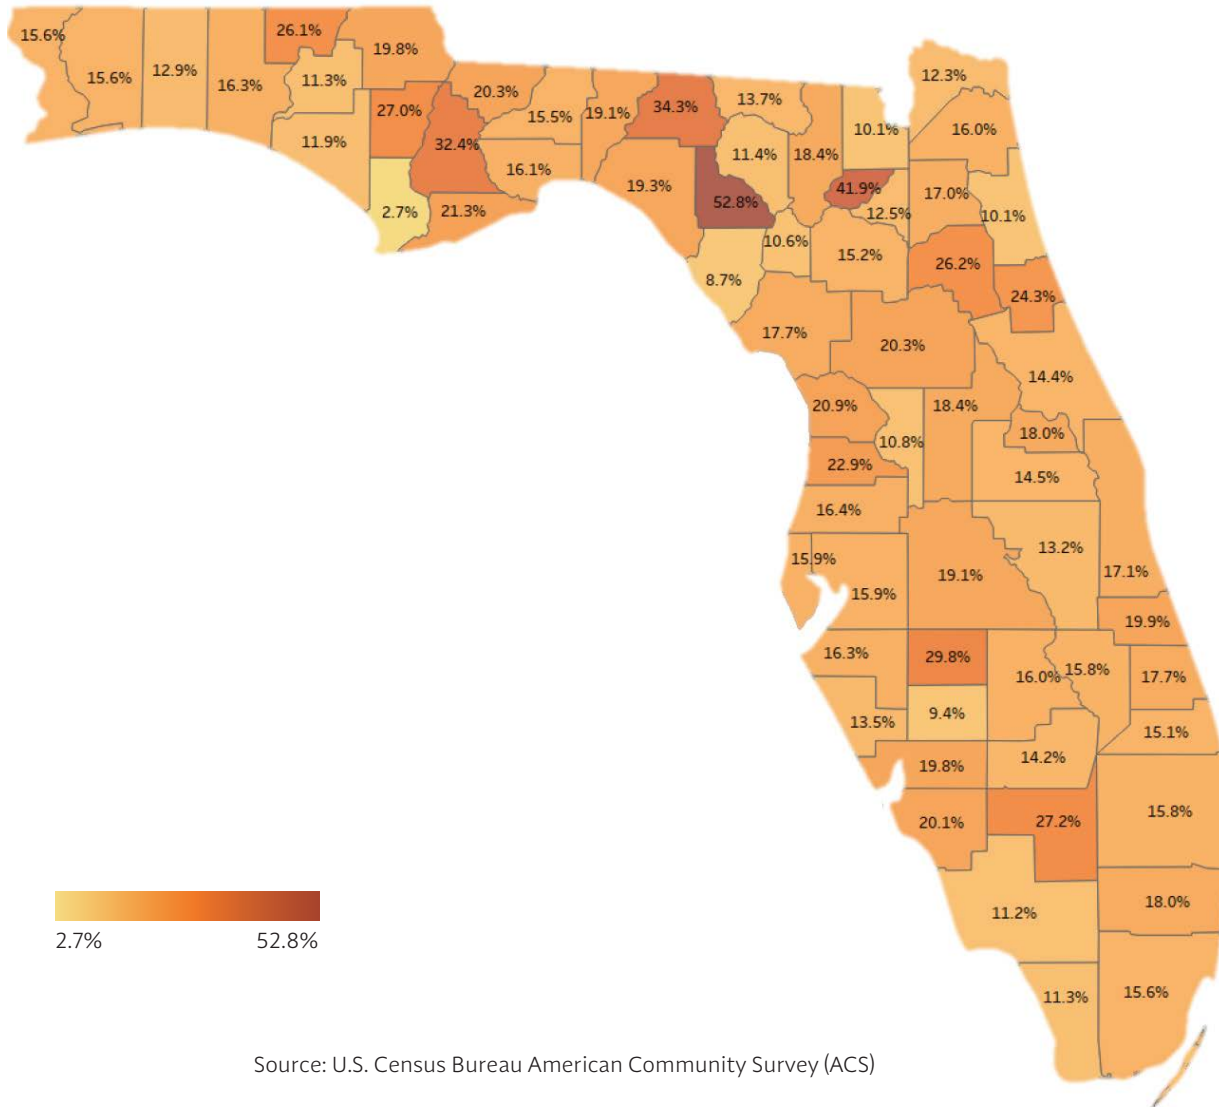

To compare how this change since 2013 compares to the unemployment rate for persons without a disability, you can see the chart on the following page. Both rates have declined during that same time, and the unemployment rate for persons with a disability is more than double the unemployment rate for Floridians without a disability.

For each of Florida’s 67 counties’ unemployment rates for people with a disability over this 5-year period, see Appendix 4. For the unemployment rate for Floridians who do not have a disability, see Appendix 5.

## Unemployment Rate for Floridians With a Disability by County – Age 18 to 64 (2017 data)

The above map shows the 2017 data for unemployment rates for Floridians with a disability. The state average for Florida is 16.3 percent. The statewide number dropped from 23.2 percent in 2013. During that time frame, 12 of Florida's counties had an increase in the unemployment rate for Floridians with a disability. This is compared to only 2 of Florida's counties that had an increase in the unemployment rate for Floridians who do not have a disability during the 2013 to 2017 time frame.

## Unemployment Rate and Number of People Unemployed With a Disability, by County

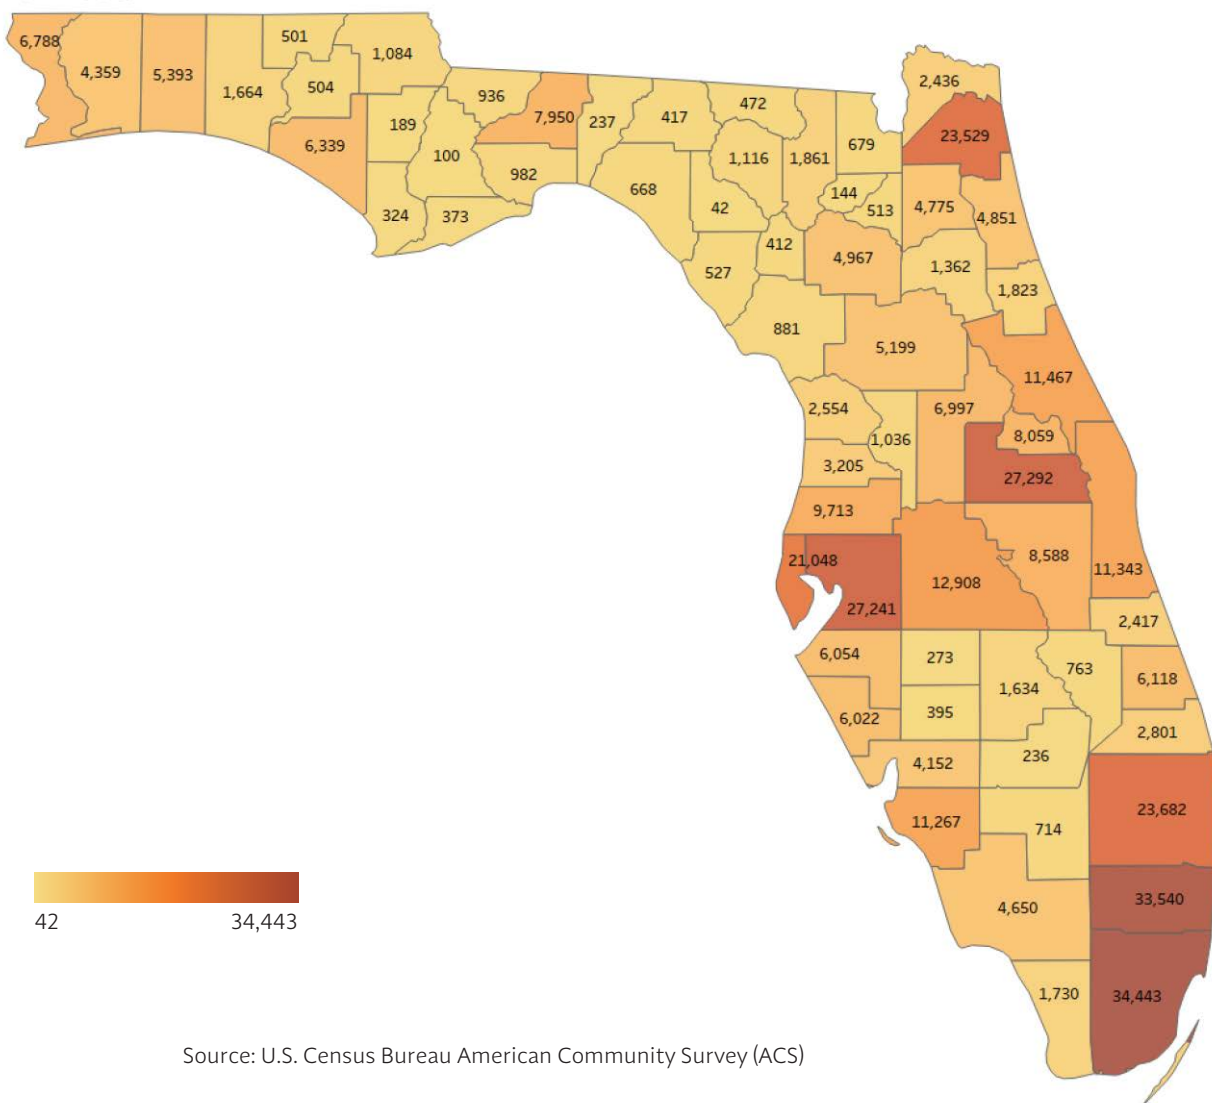

AREA	WITH A DISABILITY	NO DISABILITY	AREA	WITH A DISABILITY	NO DISABILITY

Source: U.S. Census Bureau American Community Survey (ACS)

When we look at the number of people who have a disability that are employed, the map below shows those numbers, by county, using the 2017 data from the American Community Survey.

### Florida's 386,739 People With a Disability Who are Employed by County — Age 18-64 (2017 data)

Source: U.S. Census Bureau American Community Survey (ACS)

The good news is that from 2013 through 2017, the number of Floridians with a disability who are employed has gone up each year, from 347,119 in 2013 to 386,739 in 2017. For details on which counties have increased and those who have decreased, see Appendix 5.

Florida, with 32.0 percent of its persons with disabilities who are working, is slightly below the U.S. average of 35.5 percent. Florida's percentage is better than most Southeastern states on this metric. The states with higher percentages in the Southeast are North Carolina and Georgia. Florida's percent of persons with disabilities trails North Carolina by 0.7 percentage points and Georgia by 0.3 percentage points. You can see the percentage, by state, in the map below.

## Not in the Labor Force

One of the most interesting and most quoted results from the previous paper was that the data showed there were more than 700,000 Floridians with a disability of typical working age that were “not in the labor force.” Because they were not in the labor force they are not counted as unemployed. Many people don’t realize that to be counted as unemployed people must either be working or looking for a job. Anyone not in either of these categories who are of typical working age are counted as “not in the labor force.”

The most recent data available indicates that there were 745,731 Floridians with a disability who are not in the labor force. The number has grown each year since 2013.

We know that Florida has continued to grow in population during these years, so a reasonable comparison is to the Florida population who are not in the labor force and have no disability.

### Floridians With a Disability – Not in the Labor Force

Source: U.S. Census Bureau American Community Survey (ACS)

What is important for Florida is that there are more than 2.9 million people in our state of typical working age that are not in the labor force. That number has been growing, as shown in this table.

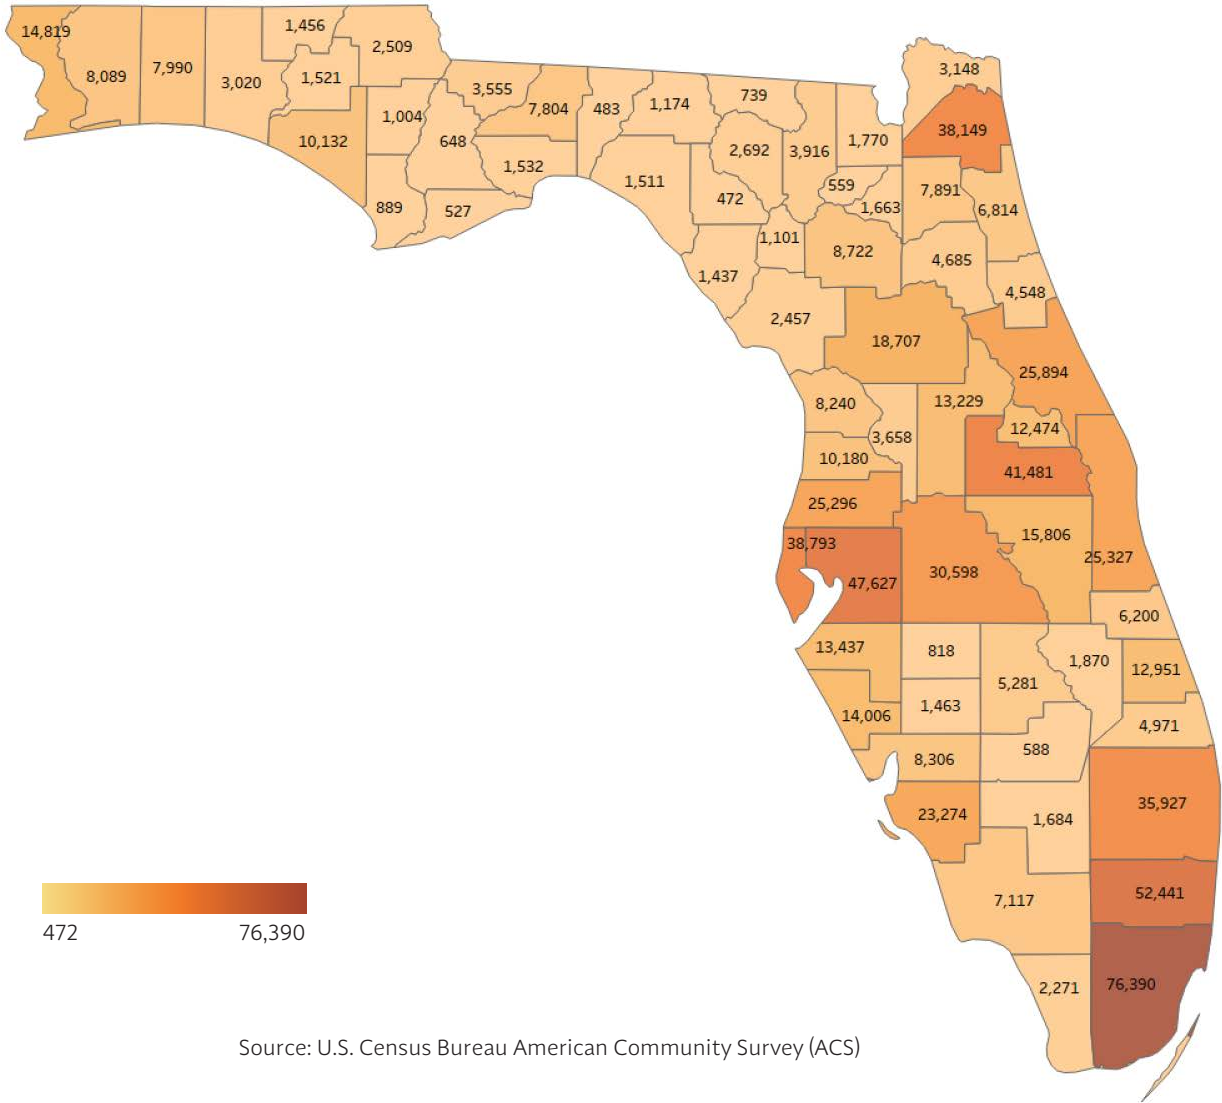

### Floridians Not in the Labor Force

YEAR	WITH A DISABILITY	NO DISABILITY	TOTAL
2013	684,895	2,045,169	2,730,064
2014	710,115	2,107,730	2,817,845
2015	726,959	2,146,555	2,873,514
2016	743,277	2,169,882	2,913,159
2017	745,731	2,206,933	2,952,664

Source: U.S. Census Bureau American Community Survey (ACS)

The number of Floridians who are not in the labor force continues to increase for both those with or without a disability. In 2013 there were 684,895 Floridians with a disability who were not in the labor force. That number increased to 745,731 by 2017. To see the number of Floridians with a disability who were not in the labor force in 2017 for each of Florida counties, see the map on the next page.

### The 745,731 Floridians With a Disability Age 18-64 Who are Not in the Labor Force by County (2017 data)

The map above shows the totals, by county, in 2017. For details for each county for each year between 2013 and 2017 see Appendix 8.

### Not in the Labor Force, by County, With and Without a Disability (2017 Data)

AREA	WITH A DISABILITY	NO DISABILITY	AREA	WITH A DISABILITY	NO DISABILITY
Florida	745,731	2,206,933	Lake	13,229	31,505

Jefferson	483	1,176	Walton	3,020	6,295
Lafayette	472	942	Washington	1,521	2,317

Source: U.S. Census Bureau American Community Survey (ACS)

Detailed data on what types of people are of typical working age who are not in the workforce is not available at the state level. No doubt, some people who would normally be working but are not in the labor force include people who have disabilities that are unable to work, as well as some family caretakers of people with disabilities. Also included in that group will be caretakers of their own children and their aging parents who need full-time care.

One additional piece of data is the percentage of those who are unemployed who have a disability. The percentages are small, but they have grown over the 5-year periods. That number is now 11.7 percent of those who are unemployed have a disability. To see the numbers by county, and over the past 5 years see Appendix 9.

## Conclusion

This report details the workforce data on Floridians with a disability, by county, for the past 5 years with a consistent data set. This report can be used as a reference to indicate where improvements are being made in incorporating Floridians with a disability into the workforce.

The good news is that Florida's unemployment rate for people with a disability has dropped from 23.2 percent to 16.3 percent from 2013 to 2017. As a comparison, the unemployment rate for Floridians who don't have a disability dropped from 11.0 percent to 6.6 percent during the same time period. The amount of Floridians with a disability who are working has increased from 347,119 in 2013 to 386,739 in 2017. That's an increase of 39,620 people.

However, there are more than 2.9 million Floridians of typical working age who are not in the labor force. Of those, one out of every 4 of them have a disability. Incorporating those who are currently not in the labor force who want to work would have substantial economic benefits both to those individuals and to the state of Florida.

Florida needs to improve our current workforce to take advantage of opportunities that can provide high-wage jobs and diversify Florida's economy. One way to do that is to incorporate more of those Floridians who are currently not in the workforce to address Florida's need to produce 1.7 million new jobs by 2030.

One of the challenges for Florida is that the numbers of people of normal working age who are not in the workforce is increasing – both those with, and those without a disability.

While the unemployment rate for persons who have a disability is falling in Florida, there could be opportunities to increase the number of that group who are working. One option is to increase the number of company and government internships, apprenticeships, mentoring, and other workforce experiences for persons with a disability, so more people can get valuable work experience to help them get that all-important first job or a job that lets them re-enter the workforce.

Another option is to remove the penalties for workers with disabilities, so that marginal increases in incomes do not result in severe losses of those programs that actually help them live independently and help them become able to work, provide for themselves, and advance in their careers.

**Florida needs  
to produce  
1.7 million  
net new jobs  
by 2030.**

## APPENDIX

### *Appendix 1.*

## Questions Used in the Survey to Estimated Persons With a Disability on Current Population Survey (CPS) by U.S. Census Bureau.

The CPS uses a set of six questions to identify persons with disabilities. In the CPS, persons are classified as having a disability if there is a response of “yes” to any of these questions. The disability questions appear in the CPS in the following format:

*This month we want to learn about people who have physical, mental, or emotional conditions that cause serious difficulty with their daily activities. Please answer for the household members who are 15 years or over.*

- 1 Is anyone deaf or does anyone have serious difficulty hearing?  
\_\_\_\_\_
- 2 Is anyone blind or does anyone have serious difficulty seeing or even when wearing glasses?  
\_\_\_\_\_
- 3 Because of a physical, mental, or emotional condition, does anyone have serious difficulty concentrating, remembering, or making decisions?  
\_\_\_\_\_
- 4 Does anyone have difficulty walking or climbing stairs?  
\_\_\_\_\_
- 5 Does anyone have difficulty dressing or bathing?  
\_\_\_\_\_
- 6 Because of a physical, mental, or emotional condition, does anyone have difficulty doing errands alone such as visiting a doctor’s office or shopping?

The CPS questions for identifying individuals with disabilities are only asked of household members who are age 15 and older. Each of the questions ask the respondent whether anyone in the household has the condition described, and if the respondent replies “yes,” they are then asked to identify everyone in the household who has the condition. Labor force measures from the CPS are tabulated for persons age 16 and older. More information of the disability questions and the limitations of the CPS disability data is available on the BLS website at: [www.bls.gov/cps/cpsdisability\\_faq.htm](http://www.bls.gov/cps/cpsdisability_faq.htm).
